

Claude Code scheduled tasks.

Your AI agent is now a 24/7 employee.
Native cron-like scheduling built into
Claude Code Desktop. Schedule any
skill or workflow to run hourly, daily,
or weekly. No external scripts. No
extra setup. **Just prompts.**

Two Ways to Set It Up

- Desktop App > Schedule tab
- Set name, prompt, schedule
- Or type /schedule in session
- Claude handles the rest

```
$ claude
> /schedule

Creating scheduled task...
Name: Morning Standup Prep
Schedule: Daily at 6:00 AM
Prompt: Review calendar, summarize
tasks
✓ Task scheduled successfully
```

Why This **Changes** Everything

BEFORE

- ✗ Scripts hit errors and stop dead
- ✗ No context awareness at all
- ✗ Can't fix itself automatically
- ✗ You debug everything manually

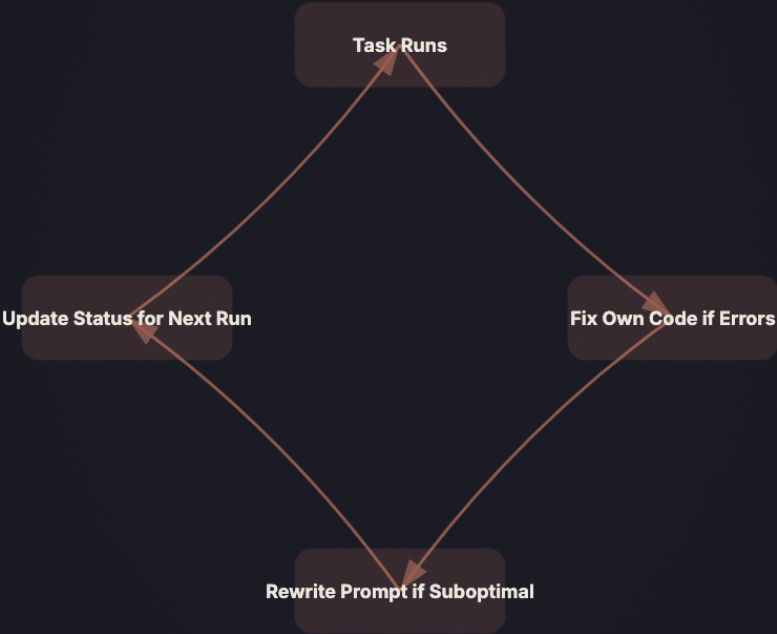

AFTER

- ✓ Hits error, tries 3 different fixes
- ✓ Reads your full project context
- ✓ Self-healing agentic workflow
- ✓ Uses all your MCP tools and skills

||

**Every morning at 6am, my
'Good Morning Shaid' skill runs.
It checks my calendar, reviews
my projects, and plans my day.
All before I wake up.**

The Self-Improving Loop

5 Pro Tips

- 01 Run manually first to catch permission issues
- 02 Add a hook for sound notifications when tasks finish
- 03 Put 'notify me when done' in prompts for Slack alerts
- 04 Use one status file per task, not append logs
- 05 Deny destructive bash commands in project settings

Limitations to Know

- 01** Desktop app must be open (catches up if you miss runs)
- 02** Each run is stateless - use a status file for memory
- 03** Lock down destructive commands in permissions
- 04** Desktop only for now - terminal support coming soon

Ideas to **Automate** Today

- Daily standup prep at 6am
- Weekly code review summaries
- Auto-triage GitHub issues
- Morning news and research briefs
- Project health checks every hour
