

Claude Code Now Runs While You Sleep

Scheduled Tasks just dropped.
Your AI agent is now a 24/7 employee.

Here's everything you need to know.

What Are Scheduled Tasks?

Native cron-like scheduling

built into Claude Code Desktop

Schedule any skill or workflow

to run hourly, daily, or weekly

No external scripts needed.

No extra setup. Just prompts.

Two Ways to Set It Up

Schedule Tab

Open Desktop App

Click Schedule tab

New Task button

Set name + prompt + schedule

Choose model + folder

Done.

From Any Session

Open any Claude Code session

Type `/schedule`

Describe what you want

Claude sets it up for you

That's literally it.

Both take under a minute to set up.

Why This Changes Everything

Traditional Scripts

- X Hits error -> stops
- X No context awareness
- X Can't fix itself
- X You debug manually

Agentic

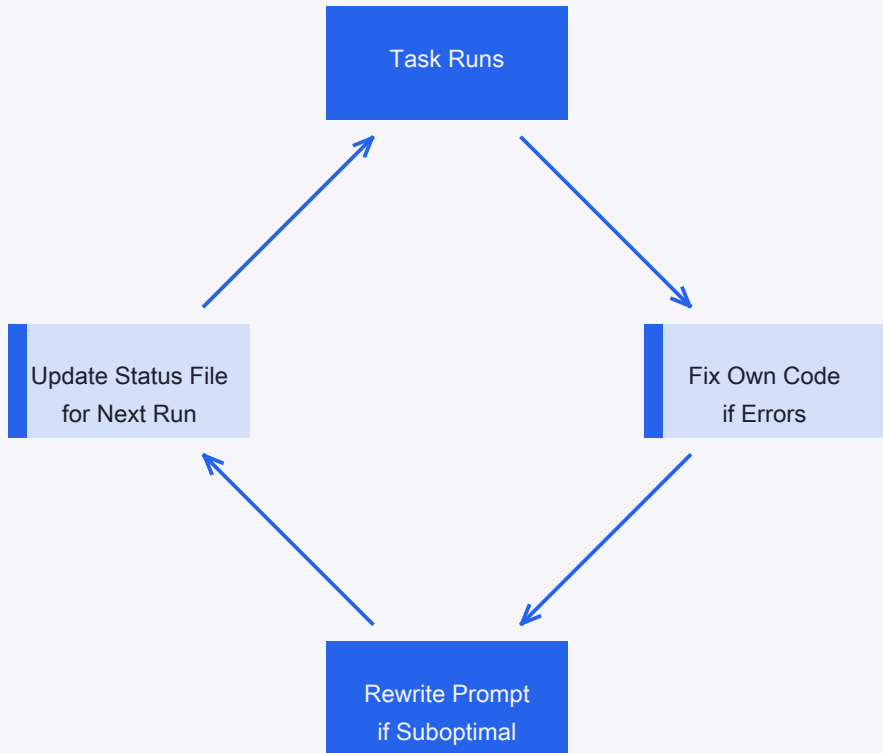

Workflows

Win

Scheduled Tasks

- ✓ Hits error -> tries 3 fixes
- ✓ Reads your full project
- ✓ Self-healing agent
- ✓ Uses all your tools

The Self-Improving Loop

“

Every morning at 6am,
my 'Good Morning Shaid' skill runs.

It checks my calendar,
reviews my projects,
and plans my day.

All before I wake up.

”

Limitations You Should Know

01

Desktop App Required

Computer on + app open
(catches up if you miss runs)

02

Stateless Sessions

Each run is fresh.
Use a status file for memory.

03

Permission Control

Lock down destructive commands.
No unsupervised deletes.

04

Desktop Only (For Now)

Terminal + IDE support
coming soon.

Pro Tips for Power Users

1

Run manually first to catch permission issues before they block your automation

2

Add a hook for sound notifications so you hear when tasks finish

3

Put 'notify me when done' in your prompts for ClickUp or Slack alerts

4

Use one status file per task, not append logs, keeps context lean

5

Deny destructive bash commands in your project settings

Ideas to Automate Today

Daily standup prep at 6am

Weekly code review summaries

Auto-triage GitHub issues

Morning news/research briefs

Project health checks every hour
