

AI On Your Phone No Internet Needed

How Qwen 3.5 lets you run
a real AI model offline
on any smartphone

What is Qwen 3.5?

Alibaba's Small Model Series

Built for on-device use

4 sizes:

0.8B - Ultra light

2B - Fast & capable

4B - Sweet spot

9B - Near cloud quality

Open source (Apache 2.0)

Free on Hugging Face

Cloud AI vs Offline AI

Cloud AI

- X Needs internet always
- X Data leaves your device
- X Monthly subscription
- X Latency on every request
- X Unusable offline

VS

Offline AI

- ✓ Download once, run forever
- ✓ Data stays on device
- ✓ Completely free
- ✓ Instant local response
- ✓ Works in airplane mode

Not Just Text Chat

Text Generation

T

Full conversations
and content creation

Vision AI

V

Analyze images
directly on device

Voice Transcription

W

Whisper-powered
speech to text

Document Analysis

D

Read and understand
PDFs and docs

How To Run It

iPhone

App: Off Grid / PocketPal AI

Needs: iPhone 12+, iOS 17+

Best: iPhone 15 Pro (8GB)

Speed: 20-30 tokens/sec

Tip: Set KV cache to q4_0

Android

App: Off Grid (Play Store)

Needs: 6GB RAM, ARM64

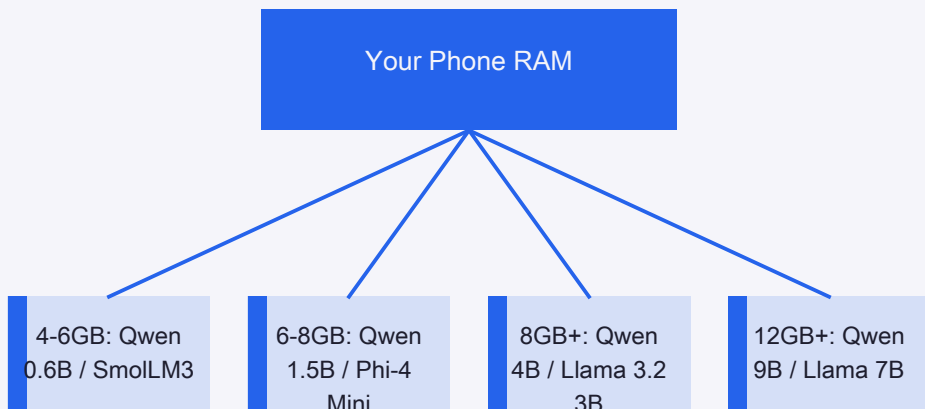

Best: Snapdragon 8 Gen 2+

Speed: 10-30 tokens/sec

Works on \$300 phones

Download model once over Wi-Fi. After that, no internet needed.

Pick Your Model

Real Use Cases

Developer debugging code on a flight
with no Wi-Fi

Student in a rural area learning
from an AI tutor offline

Field worker getting instant answers
without cell coverage

Privacy-first user who never wants
data leaving their device

Apps that work without
internet dependency

Setup: iPhone (Off Grid)

1

1. Open the App Store and search "Off Grid"

2

2. Install the app (free, no account needed)

3

3. Open Off Grid and tap the model browser

4

4. Models are filtered by your device's RAM

5

5. Tap a model (start with Qwen 3 0.6B or 1.5B)

6

6. Download over Wi-Fi (80MB to 4GB)

7

7. Once downloaded, start chatting instantly

Setup: Android (Off Grid)

1

1. Open Play Store and search "Off Grid"

2

2. Install the app (free, open source, MIT license)

3

3. Open Off Grid and browse recommended models

4

4. Pick a model based on your RAM (6GB+ needed)

5

5. Download over Wi-Fi (80MB to 4GB)

6

6. Turn on airplane mode to verify it works

7

7. Start chatting with zero internet

Pro Tip: Speed Boost

After your first chat, go to Settings

Find "KV Cache Quantization"

Switch from f16 to q4_0

This roughly triples inference speed
with minimal quality loss

Also: First message is always slower
as the model loads into memory

Subsequent messages are much faster

“

AI that works without
the internet is not a feature.

It's the future.
