

**Claude
Code Can
Now
Control
Your
Computer.**

Anthropic just shipped **Computer Use for Claude Code. It can now natively control your mouse, keyboard, and take screenshots to interact with any app on your desktop. Here's what it does, how to set it up, and the best use cases.**

The Announcement

Anthropic's official post - Computer Use is live in Claude Cowork and Claude Code

Claude  
@claudeai

You can now enable Claude to use your computer to complete tasks.

It opens your apps, navigates your browser, fills in spreadsheets—anything you'd do sitting at your desk.

Research preview in Claude Cowork and Claude Code, macOS only.

 RESEARCH PREVIEW

Reach your desktop
from your pocket

Enable It in Settings

Claude Desktop App → Settings → General → Toggle Computer Use ON

How It Works

Claude takes a screenshot of your screen

Identifies UI elements and buttons

Clicks, types, and navigates for you

Asks for confirmation on sensitive actions

You:

> Find the ROI calculator PDF in my downloads and send it via ClickUp DM

✓ Opened Finder → Found PDF

✓ Opened ClickUp → Found chat

✓ Attached file → Sent DM

The Dispatch Combo

BEFORE

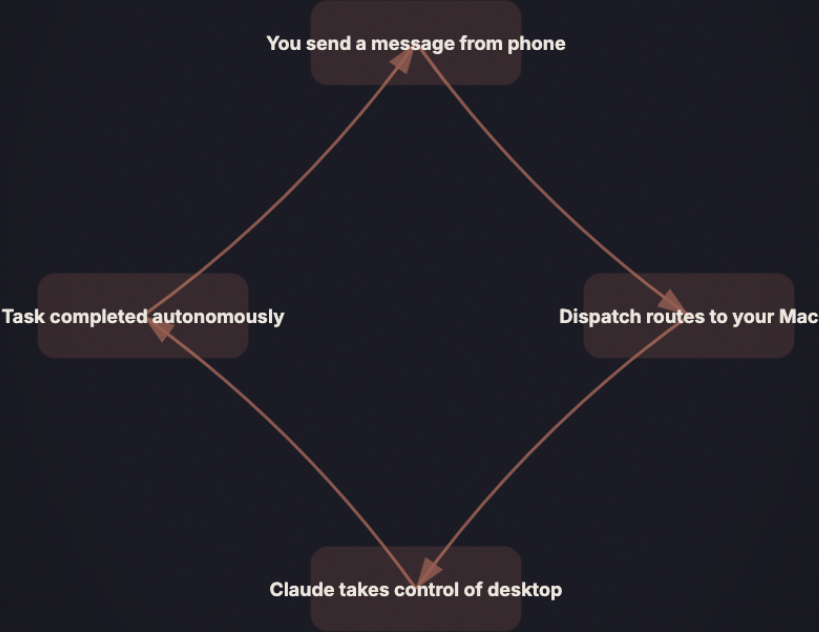

- ✗ You're away from your desk
- ✗ Someone needs a file urgently
- ✗ You can't remote into your laptop
- ✗ Task sits waiting until you're back

AFTER

- ✓ Text Claude from your phone
- ✓ It wakes your computer
- ✓ Opens the right app automatically
- ✓ Finds the file and sends it

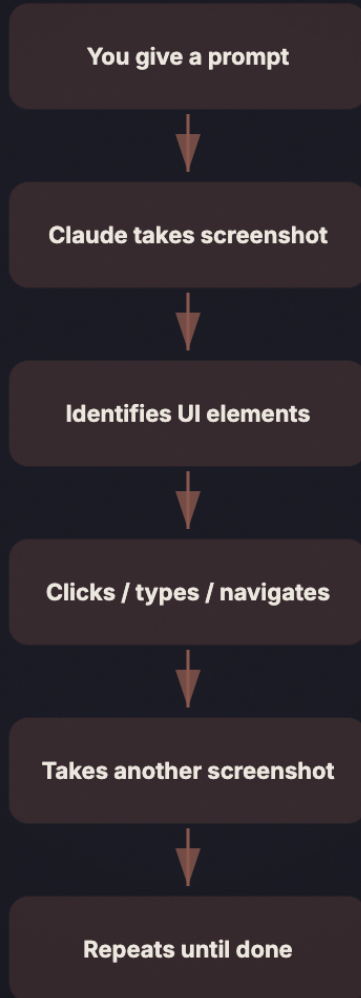

The Workflow

What It Can Do

- 01** Screenshot Capture - see your screen in real time
- 02** Mouse Control - click, drag, scroll, move cursor
- 03** Keyboard Input - type text and use shortcuts
- 04** Desktop Automation - interact with any app

Under the Hood

The Agent Loop

- Claude sees your screen via screenshots
- Decides which tool action to take next
- Executes: mouse click, keyboard, or bash
- Checks the result via new screenshot
- Loops until the task is complete
- Asks for confirmation on risky actions

Safety Built In

BEFORE

- ✗ Prompt injection from screenshots
- ✗ Accidental clicks on sensitive data
- ✗ Unauthorized actions on accounts
- ✗ Runaway automation loops

AFTER

- ✓ Auto-classifiers flag injections
- ✓ Permission required per app
- ✓ Confirmation before send actions
- ✓ Sandboxed environment recommended

Best Use Cases

- 01 Send files via Slack, Telegram, or any app
- 02 Run calculations and save to Notes
- 03 Automate legacy apps with no API
- 04 Schedule recurring desktop tasks
- 05 Test your apps - find bugs automatically

Current Limitations

- Research preview (Mac OS only, Windows coming soon)
- Can't click inside browsers (security restriction)
- Workaround: Chrome extension or Playwright CLI
- Pro and Max plans only (not Teams/Enterprise)
- No drag, zoom, or fast notification handling yet

Who Gets Access

- Available in Claude Desktop App (Mac OS)
- Works in both Cowork and Claude Code
- Requires Pro or Max subscription
- Windows support coming in weeks
- Teams and Enterprise plans coming later

||

**It's pretty much going to be as if
you have a real human working
on your laptop.**

The Big Picture

- Anthropic ships a new feature almost every day
- Moving toward full native desktop control
- Browser automation coming next
- Scheduled tasks + Computer Use = AI employee
- Connectors first, Computer Use as fallback
