

**Stop Using
Bypass
Permissions.**

The Announcement

Claude Code just released Auto Mode -- a smarter way to handle permissions

The Problem

BEFORE

- ✗ Ask Before Edits = stops every few seconds
- ✗ You can't walk away from long tasks
- ✗ Every bash command needs approval

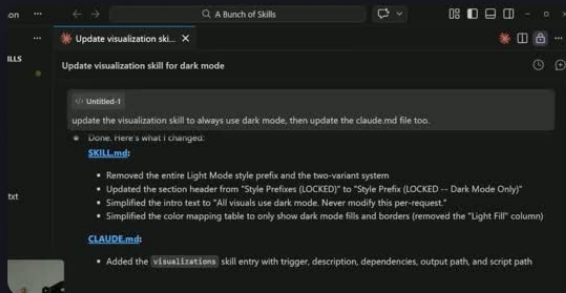

AFTER

- ✓ Bypass Permissions = no safety net
- ✓ Claude can delete files, run anything
- ✓ Called 'dangerously skip' for a reason

What Ask Mode Looks Like

Every edit, every bash command -- Claude stops and waits for your approval

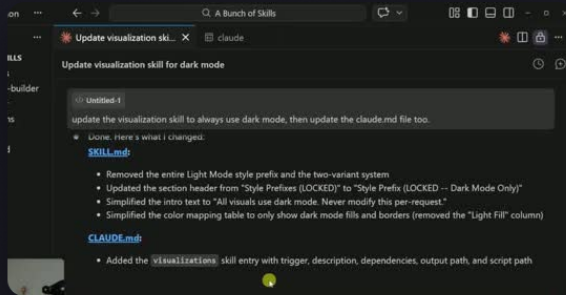

Enter **Auto Mode**

- A classifier checks each action before executing
- Safe actions run automatically
- Risky actions get flagged and blocked
- Claude tries a different approach if blocked
- Ideal for long-running tasks

Auto Mode In Action

Notice 'Auto mode' in the bottom bar -- Claude handles permissions intelligently

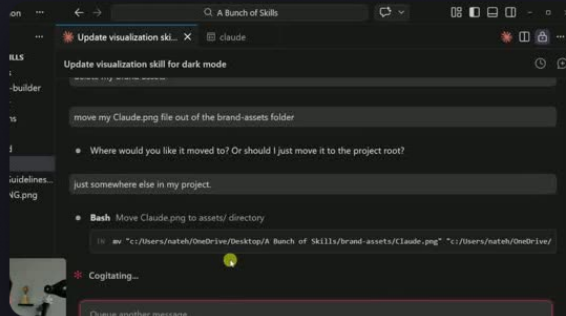

How The **Classifier** Works

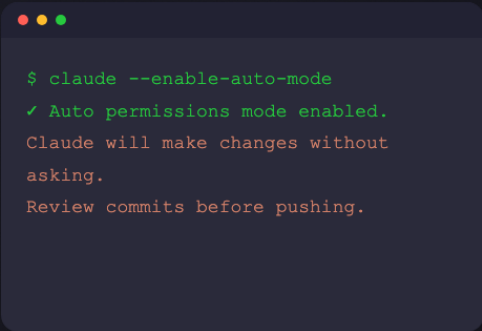

Risky Actions Get Flagged

Tried to delete files -- Auto Mode caught it and asked for confirmation

How to Enable It

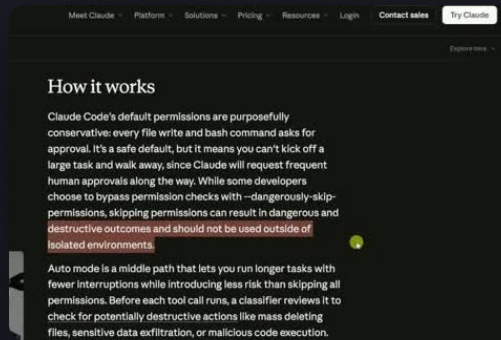

- Available for Claude Team plans now
- Enterprise + API coming soon
- Works in terminal and VS Code
- Toggle via Shift+Tab in CLI

```
$ claude --enable-auto-mode
✓ Auto permissions mode enabled.
Claude will make changes without
asking.
Review commits before pushing.
```

Official Announcement

Anthropic's blog -- Auto mode sits between 'ask everything' and 'skip everything'

Key Takeaways

- 01** Auto Mode = smart middle ground for permissions
- 02** Classifier checks every tool call for risk
- 03** Safe actions run, risky ones get blocked
- 04** Sessions cost slightly more (AI reviews each action)
- 05** Best for long-running tasks you want to walk away from
