

Build Claude Agent Teams.

Most people use Claude Code as a **single agent. But there's an experimental feature that lets you spin up **multiple agents** that work in parallel, talk to each other, and QA each other's work. Here's the framework to do it right.**

Sub-agents vs Agent Teams

BEFORE

- ✗ Work independently
- ✗ Report back to one main agent
- ✗ Can't coordinate with each other
- ✗ Sequential bottleneck

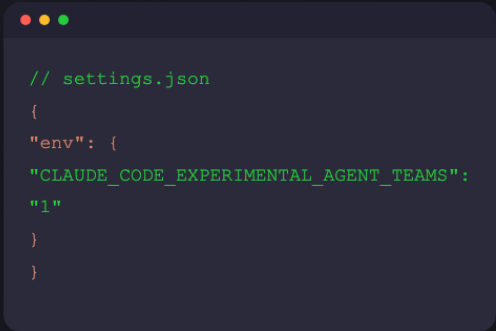

AFTER

- ✓ Share a task list
- ✓ Message each other directly
- ✓ React to each other's work
- ✓ True parallel execution

Step 1: Enable the Feature

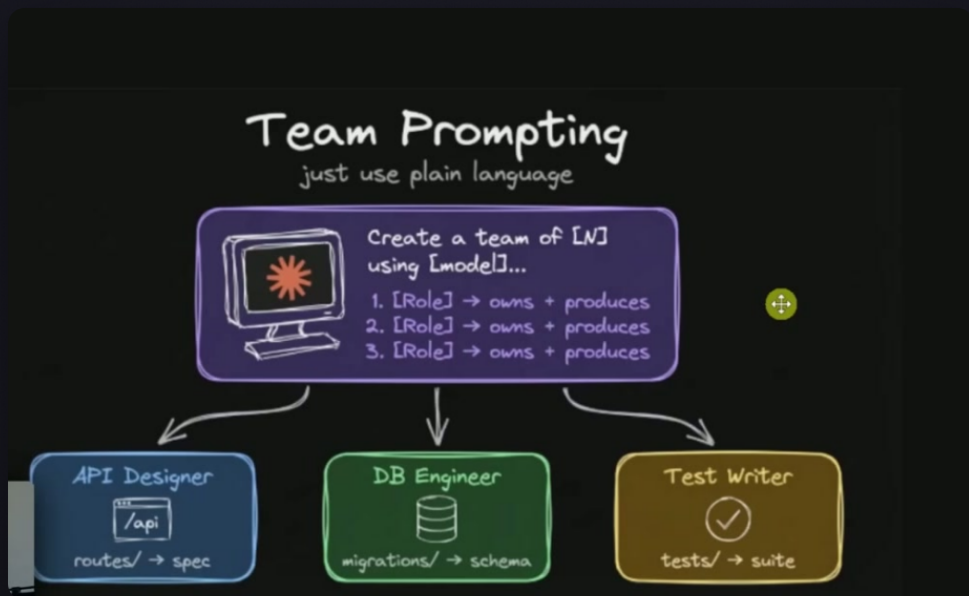

Agent Teams are experimental.
Disabled by default.
One setting turns it on.

```
// settings.json
{
  "env": {
    "CLAUDE_CODE_EXPERIMENTAL_AGENT_TEAMS":
      "1"
  }
}
```

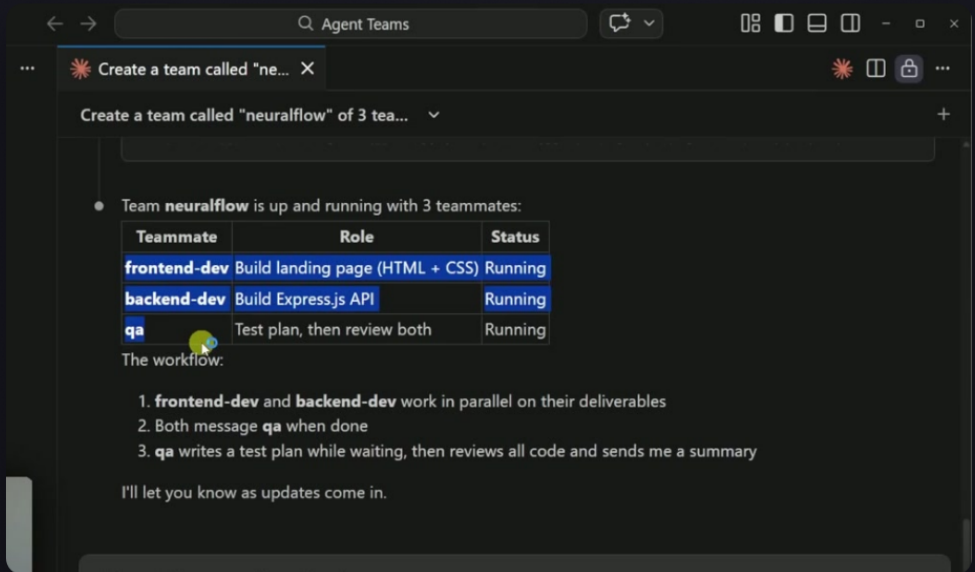

Step 2: Prompt with Structure

Name the agents. Define roles. Assign file ownership. Set deliverables.

Step 3: Watch Them Build

Each agent gets its own context window. They coordinate via shared tasks and messaging.

The Do vs Don't Rules

Follow these prompting rules to avoid the #1 failure mode: agents overwriting each other.

✱ Agent Team Prompts

Claude Code

✓ DO

-  Own specific files
-  Define output
-  Name recipients
-  3-5 teammates
-  Give full context

✗ DON'T

-  Share same file
-  Vague deliverables
-  Assume the plan
-  10+ teammates
-  No history given

The QA Loop Pattern

- 01** Spawn dev agents for parallel work (frontend, backend, etc.)
- 02** Add a dedicated QA agent that reviews others' work
- 03** QA finds issues and sends them back to dev agents
- 04** Automated review cycle without human intervention
- 05** Monitor via tmux split-pane to watch all agents live

The Architecture

When **NOT** to Use Teams

- Simple tasks that one agent can handle
- Sequential work where each step depends on the last
- Same-file edits (agents will overwrite each other)
- When sub-agents are good enough

Teams shine for parallel, multi-domain projects.

The future of AI coding isn't one agent doing everything. It's a team of agents, each owning their domain, coordinating like real developers.
