

Claude Code skills.

**Stop repeating yourself. Teach
Claude your workflow **once**. It
remembers **forever**.**

The **Problem** Every Dev Has

- Every new Claude session starts from zero
- "Follow our team's coding conventions"
- "Use TypeScript strict mode"
- "Run tests before committing"
- "Format the PR description like this"

You paste the same context. Again and again.
Skills are the permanent fix.

What Is a Skill?

- A SKILL.md file with instructions
- Slash command to invoke it
- Bundle scripts, templates & examples
- Claude loads it automatically

```
# .claude/skills/code-  
reviewer/SKILL.md  
  
---  
  
name: code-reviewer  
description: Review code for  
conventions  
user-invocable: true  
  
---  
  
# Code Reviewer  
- Check for TypeScript strict mode  
- Flag any `any` types  
- Verify test coverage > 80%
```

Where Do **Files** Go?

BEFORE

- ✗ Option A: Self-Contained
- ✗ `.claude/skills/infographic/`
- ✗ `SKILL.md`
- ✗ `scripts/generate-image.js`
- ✗ `references/style-guide.md`

AFTER

- ✓ Option B: Stored Elsewhere
- ✓ `my-project/`
- ✓ `.claude/skills/infographic/SKILL.md`
- ✓ `scripts/infographic/generate.js`
- ✓ `references/style-guide.md`

How a Skill Executes

Skill Creator in Action

BEFORE

- ✗ False Triggers
- ✗ Missed Fires
- ✗ Wrong skill loads
- ✗ Too broad or narrow

AFTER

- ✓ 5 of 6 improved
- ✓ Precise triggers
- ✓ Zero false fires
- ✓ Optimized descriptions

Where Skills Live

- `~/.claude/skills/` (Personal)

Follows you across all projects

Your coding style & preferences

- `.claude/skills/` (Project)

Committed to git with your repo

Shared with your entire team

Use both. Personal for you, project for your team.

Build Your First Skill in 5 Min

- 01 Create `.claude/skills/my-skill/` folder
- 02 Add a `SKILL.md` with YAML frontmatter
- 03 Write step-by-step instructions in markdown
- 04 Drop in example outputs or helper scripts
- 05 Type `/my-skill` and watch it execute

What You Can Automate

- Code reviews with your team's standards
- PR descriptions from git diff
- Blog posts in your exact writing voice
- Database migrations with safety checks
- Security audits against OWASP rules
- Test generation for your specific stack
- Document generation (PDF, DOCX, PPTX)

Anything you repeat becomes a skill.

The developers who win with AI won't be the ones who prompt better. They'll be the ones who build systems around AI.
