

pixel agents.

Your AI agents now have a **virtual office. A free VS Code extension that turns your coding agents into **animated pixel art characters**. They walk, sit at desks, and react to what your agent is **actually doing**.**

The Problem

- You fire up Claude Code in the background
- Just a blinking cursor and scrolling text
- Zero visual feedback on what the agent is doing
- No way to know if it's stuck or making progress
- Reading terminal logs is painful

**What if you could actually
watch your AI agents work? Not
read logs. Watch them.**

Install in 30 Seconds

- Search 'Pixel Agents' in VS Code
- Or install from command line
- Open with Cmd+Shift+P
- Click +Agent to spawn characters

```
$ code --install-extension  
pablodelucca.pixel-agents  
Installing extension...  
✓ Extension installed successfully  
  
# In VS Code:  
Cmd+Shift+P > Pixel Agents: Open  
Office  
✓ Office opened. Click +Agent to  
spawn.
```

Meet the Characters

Six unique pixel art characters, each representing a different coding agent

What Gets **Animated**?

BEFORE

- ✗ Writing code: cursor blinking
- ✗ Reading files: scrolling text
- ✗ Running commands: no indicator
- ✗ Waiting for input: looks frozen
- ✗ Idle: no way to tell

AFTER

- ✓ Writing code: types at desk
- ✓ Reading files: reads documents
- ✓ Running commands: runs around
- ✓ Waiting: speech bubble appears
- ✓ Idle: walks to break room

This Is the Office

Your AI agents sit at desks, walk around, and work in a pixel art office in real time

Why Devs **Love** It

- 01** Visual feedback without reading terminal logs
- 02** Covered by Fast Company, trending on GitHub
- 03** Free and fully open source
- 04** Build custom offices with 64×64 grid editor
- 05** Six unique pixel art characters

The Bigger Picture

- AI agents are becoming teammates, not tools
- Visualizing their work builds trust
- Gives you instant feedback on agent state
- This is just the beginning of human-AI interaction
- The future of coding is spectator-friendly
