

Your AI Agents Now Have a Virtual Office

Meet Pixel Agents

The extension that turned
AI coding into a spectator sport

This Is the Office

Your AI agents sit at desks, walk around, and work in a pixel art office in real time

The Problem

You fire up Claude Code

It starts working in the background

Just a blinking cursor

and a wall of scrolling text

Zero visual feedback

on what your agent is doing

“

What if you could actually
watch your AI agents work?

Not read logs.

Watch them.

”

Enter Pixel Agents

A free VS Code extension
that turns your AI coding agents
into animated pixel art characters

They walk, sit at desks, type code
and react to what the agent
is actually doing in real time

Meet the Characters

Six unique pixel art characters

Each one represents a different coding agent

Install in 30 Seconds

Search "Pixel Agents" in VS Code Extensions
or run this command:

```
1 # Option 1: VS Code Marketplace
2 # Open Extensions (Ctrl+Shift+X)
3 # Search: "Pixel Agents"
4 # Click Install
5
6 # Option 2: Command Line
7 code --install-extension pabodelucca.pixel-agents
8
9 # Then in VS Code:
10 # Cmd+Shift+P > "Pixel Agents: Open Office"
```

How It Works

01

Watches Transcripts

Reads Claude Code's JSONL files to track what each agent is doing

02

Spawns Characters

Each terminal you open creates a new pixel character in the office

03

Animates Actions

Writing code? Character types
Searching files? Character reads

Agents at Work

Characters react in real time to what
your AI agent is doing behind the scenes

What Gets Animated?

- Writing code: character types at desk
- Reading files: character reads documents
- Running commands: character runs around
- Waiting for input: speech bubble appears
- Idle: character walks to break room

Build Your Own Office

01

64x64 Grid Editor

Design floors, walls, and rooms
with a built-in layout editor

02

Furniture Catalog

Desks, chairs, bookshelves, plants
All included out of the box

03

Multiple Rooms

Break room, meeting room, work area
Customize everything

“

It does nothing productive.
But developers can't stop watching it.

That's how you know
it solves a real UX problem.

”

Why Developers Love It

01

Visual Agent Feedback

See what your agent is doing
without reading terminal logs

02

Covered by Fast Company

Gone viral on dev Twitter
Trending on GitHub

03

Free & Open Source

Available on VS Code Marketplace
Fully open source on GitHub

The Bigger Picture

AI agents are becoming teammates
not just tools

Visualizing their work builds trust
and gives you instant feedback

This is just the beginning of
how we'll interact with AI agents
