

**Stop Using
Opus
Wrong.**

Opus is powerful. But using it for every single task is like hiring a senior architect to write boilerplate. Here's the strategy that stretches your session limit and cuts costs without sacrificing quality.

The **Advisor** Strategy

Old Way vs Advisor Strategy

BEFORE

- ✗ Opus handles every task regardless
- ✗ Session limit hit in 30 minutes
- ✗ High cost for routine work
- ✗ Overkill for simple operations

AFTER

- ✓ Opus advises only on hard tasks
- ✓ Sonnet/Haiku execute the work
- ✓ Session lasts 2-3x longer
- ✓ Same output quality, fraction of cost

Same Prompt. 3 Models. 21x Cost Gap.

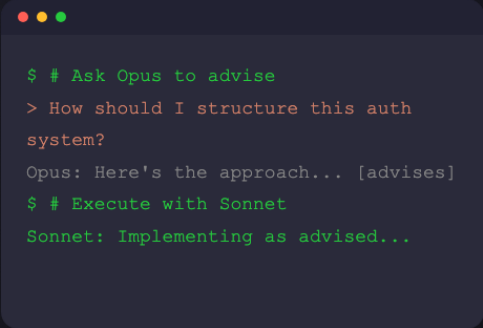

MODEL	COST	OUTPUT
Haiku	\$0.06	Clean, accurate answer
Sonnet	\$0.17 (2.8x)	Same answer + polished tone
Opus	\$1.26 (21x)	Same answer + opened ticket

Task Routing Guide

- 01** Haiku: Boilerplate, formatting, simple rewrites
- 02** Sonnet: Medium features, standard debugging
- 03** Sonnet: Most everyday coding tasks
- 04** Opus (advise only): Architecture decisions
- 05** Opus (advise only): Hard logic bugs
- 06** Opus (advise only): Complex reasoning chains

Opus as Pure Advisor

For hard tasks: ask Opus what to do.
Then have Sonnet actually do it.
Opus stays in advisory mode only.

```
$ # Ask Opus to advise  
> How should I structure this auth system?  
Opus: Here's the approach... [advises]  
$ # Execute with Sonnet  
Sonnet: Implementing as advised...
```

The Cost Math

- Opus: ~\$15 per million tokens
- Sonnet: ~\$3 per million tokens
- Haiku: ~\$0.25 per million tokens
- Most work is Sonnet-level
- Save Opus for where it actually matters

**Opus thinks. Sonnet builds.
Haiku handles the rest. Knowing
which to reach for is the real
skill.**

Stretch Your Session Limit

- Lighter models use fewer tokens per task
- More tasks fit in the same session
- Less context bloat from heavy responses
- Plan with Opus, execute with Sonnet
- Check in with Opus only when stuck
